SEVERE WEATHER RECOMMENDATIONS

General weather restrictions for worker's use of Tutus products depends on the customer's intended activity, jobsite location, and the manufacturer's equipment specifications / restrictions. Once deployed at a jobsite, Tutus products may remain installed on equipment between tasks. Tutus products should be removed for equipment transportation at highway speeds.

When routine wind restrictions prevent product use, equipment that has been lowered/retracted to a position of worker egress may remain in such position without removing Tutus products.

However, expected severe weather activity may warrant further precautions to guard against damage from winds, and associated flying debris.

Tutus products may remain deployed on equipment protected from flying debris by walled/fenced enclosures, or within enclosed storage space. Tutus recommends the removal, re-packaging, and storage of its products as well as other accessories which may be damaged or dislodged from equipment and themselves become flying debris in harsh conditions.
